

Need to collect data quickly and easily? Perhaps [EpiSurveyor](#), a secure data collection system for mobile phones, from DataDyne can help. EpiSurveyor can be used to set up, collect and partially analyse data collected on common and inexpensive mobile phones. The data can be collected on any topic, not just health, and in any country.

[Register](#) and follow the onscreen instructions to start creating forms immediately! There is a free version, which 99% of EpiSurveyor's users manage to use, or there are chargeable versions which are less limited. EpiSurveyor has a lot of positive feedback from many previous users, including large organisations such as the World Health Organization, and has won awards.
